

6065

The first recessed luminaire with a genuine daylight

The 80 years experience of the daylight specialist is now available for integration into false ceilings.

PERFORMANCE AND COMFORT OPTIMISATION

Lighting of work stations and surrounding areas often causes visual tiredness because it is rarely appropriate to precision work and, most of the time, not homogeneous on the whole work area.

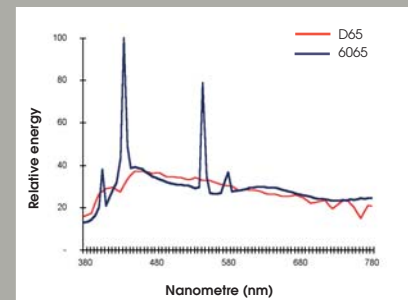

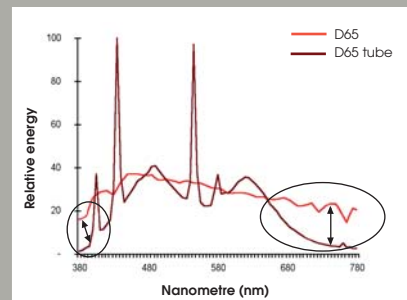

The installation of quality lighting, diffusing an equilibrated light on the totality of your technical ward, improves your work comfort, your visual performances and optimizes the working conditions of your team.

Complement or replacement of a Gamain ceiling luminaire, our new recessed product range 6065 will bring a unique visual comfort and a perfect sight of colours and shades to your office (dental consulting, surgery room, decontamination / sterilization room, laboratories, and all offices without windows).

Its easy installation combined with its standardized size creates a continuous luminous flux within your work space.

Unlike artificial light, Gamain lightings allow an unflinching vision of colours thanks to a unique combination of several light sources. Gamain light fittings comply with International Commission on Illumination's Illuminant D65. They provide a full and balanced spectrum from near ultraviolet to far infrared.

A fluorescent lighting, even regulate on a colour temperature of 6500 K is not sufficient enough. There is a lack of vivid blue and deep red. Thus a colour located in these areas of the spectrum won't be differentiated.

THIS RECESSED CEILING LIGHT IS AVAILABLE IN TWO VERSIONS:

■ FOR OPERATING ROOM

Dust and liquid tight

IP65.

Réf.: 6065SB

■ STANDARD VERSION

For every type of false ceilings

IP20.

Réf.: 6065

Sold by pairs of same reference	

ADVICES

Gamain's staffs is at your disposal for giving you pieces of advices and recommendations regarding the introduction of your recessed ceiling luminary in an appropriate way and environment.

MAINTENANCE

- Gamain recommends changing all the luminous sources every two years. Keep an eye on fluorescent bulbs.
- For an optimal light diffusion, please be watchful about the regular cleaning of the diffuser with a medical towel.
